## FOREWORD

Seed Certification in Wyoming is authorized by the Wyoming Seed Law, Chapter 12 (11-12-119). This law designated the College of Agriculture of the University of Wyoming as the official seed certifying agency for the state. Seed Certification is conducted under the direction the Agricultural Experiment Station and the University of Wyoming Cooperative Extension Service.

The Wyoming Crop Improvement Association (WCIA) serves as an advisory board to the Seed Certification Service. The WCIA is an organization of seed growers with a common interest in the Wyoming seed industry. The function of this organization is to advise the Seed Certification Service, distribute information concerning seed, promote certified seed and conduct any other business the members deem necessary for the betterment of the certified seed industry. The Association is governed by a board of directors elected by the membership and represent the various districts of the state. In addition, the Director of the Wyoming Agricultural Experiment Station; the Department Head for Plant Sciences and the Director of the University of Wyoming Cooperative Extension Service preside on the board as ex-officio directors.

Growers listed in this directory are members of WCIA, producing seed in accordance with the rules and regulations set forth by the Wyoming Seed Certification Service, which is a member of the Association of Official Seed Certifying Agencies (AOSCA). AOSCA is an organization composed of agencies responsible for seed certification in the U.S., Canada, and New Zealand.

Certified seed may be sold bagged or in bulk. Bagged seed must be packaged in new containers and have an official certified tag attached to each bag. Certified seed sold in bulk must be accompanied by a bulk sales certificate completed and signed by the grower.

"Certification" of any seed lot by the University means only that the certified seed lot has been visually inspected and that random samples have been tested and have been found to be in compliance with applicable standards as set forth by the Wyoming Seed Certification Service. Certification of any lot is not a guaranty or warranty that the certified lot is free from defects such as disease, rot or noxious weeds.

**(THE SELLER, THE INSPECTOR, UNIVERSITY OF WYOMING AND ANY OF ITS ENTITIES MAKE NO WARRANTY OF ANY KIND, EXPRESSED OR IMPLIED, CONCERNING SAID SEED, INCLUDING MERCHANTABILITY, FITNESS FOR PARTICULAR PURPOSE, QUALITY OR ABSENCE OF DISEASE).**

## SEED CLASSES

FOUR CLASSES OF SEEDS OR PROPAGATING MATERIALS ARE RECOGNIZED IN SEED CERTIFICATION: BREEDER, FOUNDATION, REGISTERED, AND CERTIFIED. THE WYOMING SEED CERTIFICATION SERVICE REQUIREMENTS FOR THESE CLASSES MUST MEET OR EXCEED THE MINIMUM STANDARDS OF THE ASSOCIATION OF OFFICIAL SEED CERTIFYING AGENCIES (AOSCA). THE FOUR CLASSES OF SEED ARE DEFINED AS FOLLOWS:

**Breeder** - Breeder seed shall be that seed or vegetative propagating material directly controlled by the originating or, in certain cases, the sponsoring plant breeder, institution, or firm which provides the source for the initial and recurring increase of Foundation seed.

**Foundation** - Foundation seed (white tag) shall be seed stocks that are so handled as to maintain specific genetic identity and purity, and which may be designated or produced by an Agricultural Experiment Station or originator. Foundation seed shall be the source of Registered and/or Certified seed.

**Registered** - Registered seed (purple tag) shall be the progeny of Foundation seed so handled as to maintain genetic identity and purity and meeting the standards set forth by the Wyoming Seed Certification Service. Registered seed is the parent stock for the production of Certified seed.

**Certified** - Certified seed (blue tag) is the progeny of Foundation or Registered seed that is so handled as to maintain genetic identity and purity and meeting the standards set forth by the Wyoming Seed Certification Service. Certified seed is the planting stock recommended for commercial production.

## PRE-VARIETY GERMPLASM SEED

The Association of Official Seed Certifying Agencies (AOSCA) has published "Pre-Variety Germplasm Certification Standards" for the certification of germplasms which have not reached varietal status. These standards apply to either wildland collected or field produced seed, and offer a reliable way for the seed industry to offer seed of different races or ecotypes to the buyer. Genetic identity is maintained, along with accurate collection-site information.

According to these certification standards, a race or ecotype of a native or naturalized species may be categorized into one of three classes:

**Source Identified** - Source Identified propagating materials are seed, seedlings, or other propagating materials collected from natural stands, seed production areas, seed fields, or orchards where no selection or testing of the parent population has been made.

**Selected** - Selected propagating materials shall be the progeny of phenotypically selected plants of untested parentage that have promise but not proof of genetic superiority or distinctive traits, produced so as to ensure genetic purity and identity from either:

- (a) Natural stands or seed production areas, or
- (b) Seed fields or orchards. This definition is equivalent to the OECD "Untested Seed Orchard" category and may be labeled as such by special tag if required.

**Tested** - Tested propagating materials shall be the progeny of plants whose parentage has been tested and has proven genetic superiority or possesses distinctive traits for which the heritability is stable, as defined by the certifying agency, but for which a variety has not been named or released. This seed must be produced so as to assure genetic purity and identity from either:

- (a) rigidly controlled and isolated natural stands or individual plants, or
- (b) seed fields or orchards.
- (c) Methods used and monitoring of selection and testing of parent material to qualify for different germplasm types shall be determined by the Certification agency for each species or group of species.

## PLANT VARIETY PROTECTION ACT

The Plant Variety Protection Act (PVPA) was signed into law December 24, 1970. The purpose of PVPA is to encourage the development of novel varieties of sexually reproduced plants and to make them available to the public, providing protection available to those who breed, develop or discover them and thereby promoting progress in agriculture in the public interest.

The owner of a new and novel variety who obtains a Certificate of Protection under the PVPA has control over the use of that variety, somewhat like an inventor has control over his patented inventions. The term of plant variety protection expires 18 years after the Certificate of Protection is issued. The owner has the right to exclude others from selling, offering for sale, reproducing, importing, exporting or using the protected variety in the production of a hybrid or different variety during this time.

Two options for plant protection are available to the developer of a variety. The **first option** enables the developer and certificate holder to sell or authorize for sale either certified or uncertified seed of the variety. If the certificate holder chooses this option he must resort to civil action if his/her rights are infringed upon within the 18 year period. The **second option** for protecting a variety is the "certification only" option which utilizes provisions of Title V of the Federal Seed Act. A variety protected in this manner may be sold by variety name only as a class of certified seed. Sale of uncertified seed by variety name is in violation of both the certificate owner's rights and federal and state seed laws. Violators of the Title V may be prosecuted by the federal or state government.

It is the responsibility of the seller to inform the buyer if the variety is protected. Each container of seed sold should be labeled with a tag indicating the type of protection which the owner has. Under the **first option** the label will state: "Unauthorized Propagation Prohibited -U.S. PROTECTED VARIETY." If the owner of the variety has chosen the "**certification only**" option for variety protection, the label will state: "Unauthorized Propagation Prohibited - To Be Sold By Variety Name Only As A Class of Certified Seed - U.S. PROTECTED VARIETY."

For more information regarding PVPA or varieties that may be protected, contact the Wyoming Seed Certification Office.

## 2009 CERTIFIED SEED LIST

The following growers and companies were producers in 2009 of Foundation (F), Registered (R), and/or Certified (C) classes of seed for the varieties listed. As of this date, fields listed are in the process of being inspected. Some may be canceled, rejected or have reduced acreages. Final certification and the right to represent the seed as certified is dependent on a satisfactory seed testing analysis. Certification is void unless a certification tag accompanies the seed.

Variety names and/or acreage figures are not listed in some instances due to confidentiality requests.

**[gwaibel@uwvo.edu](mailto:gwaibel@uwvo.edu)**

**[rdhall@uwvo.edu](mailto:rdhall@uwvo.edu)**

Minimum sample size as required for analysis and testing as follows:

1. All cereals, beans or seeds of similar size..... 2 lbs.
2. Large-seeded grasses  
(such as wheatgrass and brome grass) ..... 1 quart
3. All small-seeded legumes and light grasses  
(alfalfa, fescue) ..... 1 pint
4. All other small-seeded grasses  
(orchardgrass, creeping foxtail) ..... 1 quart

The person submitting a seed sample to the seed laboratory should mail the seed in a clean, sturdy container to prevent damage or spillage during transit.

**A Seed Plant Conditioning Report Form should accompany each Certified seed sample. Forms are available from the Wyoming Seed Certification Service.**

## APPROVED SEED PROCESSORS

An approved conditioner is one that has been inspected and authorized by the Wyoming Seed Certification Service to condition seed which is eligible for certification in Wyoming. The building, equipment, storage facilities, training and experience level of the employees must be satisfactory before a conditioner can be approved. Conditioners have the responsibility of maintaining genetic purity and identity of all certified seed lots and keeping records according to the instructions issued by the certifying agency. Upon receiving approval status, conditioners are authorized to receive, clean, sample, treat and tag certified seed.

The following seed conditioners have been inspected and approved by the Wyoming Seed Certification Service or another state's seed certification agency to condition seed eligible for certification through April 2010. It does not include seed producers approved to condition only their own seed.
